NOVA ENGINEERING ANNOUNCES CORPORATE EXPANSION WITH OPENING OF RF MICROTECHNOLOGY CENTER

CINCINNATI, OHIO, AUGUST 7, 2006 – Nova Engineering, a leading manufacturer of state-of-the-art communications systems, announced today that it has significantly expanded its capabilities in the field of subminiature RF communications devices with the opening of its Nova RF (Radio Frequency) Microtechnology Center in Largo, Florida.

The Nova RF Microtechnology Center focuses on the design and manufacture of miniaturized RF communications products for wide-ranging applications. The new group, which employs 12 engineers and technicians, manufactures key components of integrated circuits, many for proprietary applications. Special strengths include high-density printed wiring board design and assembly, hybrid and multi-chip module design and assembly, and RF application-specific integrated circuits. The company also has expertise in probing, laser trimming, functional testing, and thermal testing of integrated circuits and wafers using automated wafer probe stations.

"The Nova RF Microtechnology Center is an important complement to Nova Engineering's considerable engineering expertise in the field of digital communications and signal processing systems," said Michael Rauf, director of marketing for Nova Engineering. "Today, it is absolutely critical, particularly in military and classified applications, to be able to substantially reduce the size and weight of communications products without sacrificing power and performance. This capability is a significant advantage in the marketplace," he concluded.

ABOUT NOVA ENGINEERING, INC.

Nova Engineering, located in Cincinnati, Ohio, is an employee-owned company specializing in the design and development of leading-edge digital communications and signal processing systems. Since 1989, Nova Engineering has successfully deployed systems for a wide variety of customers, including all branches of the U.S. Military and many government agencies, as well as a host of Fortune 500 companies.
